Subject: Re: Bremerton Gasworks SAP & QAPP

I have reviewed the SAP & QAPP. Since it appears you will be analyzing the samples for Chrom VI, I strongly urge you to incorporate Don Matheny's comments concerning the analysis. We have had problems at another site with the lab that did not use the correct digestion method and we ended up with a number of false positives.

In general, I thought the plans were well organized and well written. I was a little surprised that you called this assessment an RI. I am used to using that term for larger Superfund sites. The only other thing was that I wanted to encourage prompt disposal of the IDW from the site, once you know whether it contains any hazardous constituents.

I have forwarded these plans to Pangini Balaraju who is with Ecology. He called me a few months ago about this site. As part of the Puget Sound Initiative, Ecology is actively looking at sites located along the Sound, including the Bremerton gasworks site. I informed him of our activities and he asked to be kept in the loop with our assessment.

I will be (b) (6) [REDACTED] You may forward the final version of these plans directly to Don Matheny as well as myself. I have included his e-mail address in the "cc" section.

Bremerton Gasworks SAP & QAPP

Attached is the Draft Remedial Work/SAP/QAPP for the Bremerton Gasworks Brownfield site for your review and comment. We are looking forward to working with you on this project.

Sincerely,
